Math Mileage™

Build basic math skills as you race against the clock!

An educational road rally that provides fun and action while reinforcing basic mathematical facts and concepts.

CBS SOFTWARE

Math Mileage™

An exciting road rally that reinforces basic addition, subtraction, multiplication and division skills and provides practice in estimation.

Kids steer their formula race cars through the countryside along a twisting, fork-filled course, choosing the roads that will get them to the number value of their computer-generated finish line as fast as possible. Math problems provide the fuel that speeds them on their way and helps develop their abilities to think ahead, both logically and strategically. And the unique Night Driving option increases the challenge while providing practice in solving problems mentally.

Number goals and math operations are randomly selected so the game is different every time you play. And each rally course may be driven through twice, reinforcing the operations and logic used in determining the best possible route.

Kids will start playing MATH MILEAGE for its exciting racing action, bright graphics and lively musical enhancement, but they'll keep on playing for its mental challenge and fun!

Use Joystick Controller.

Features:

Three Skill Levels
Level One allows younger children to gain an understanding of simple addition and place value.

Level Two provides solid practice in addition and multiplication with 256 possible combinations of course layouts and number goals.

Level Three is for advanced racers and requires a greater use of logic, strategy and mental arithmetic.

Learning Aids
Colored flags and musical cues advise racers on their progress and point out hazardous road conditions like multiplying by zero or overshooting the goal.

Recap Screen
After each race, a recap screen reviews scores, routes and times for up to four players.

Night Driving and Replay Options
Racers may choose to drive at night for more challenge (operations and numbered goals are obscured from view, requiring use of mental arithmetic) and/or may choose to better their score on a course just completed.

1 to 4 Player Capacity
Racers take turns trying to beat the clock and achieve their own personal best.

Bright, Realistic Graphics and Musical Rewards

Limited 90-Day Warranty

Developed and programmed by Marcia M. Burrows
Marcia Burrows spent many years as an elementary school teacher. Her special expertise is in basic mathematics and her experience includes organizing and operating a math lab. A mother of three, she is a self-taught programmer and designer.
